

The DPM is comprised of two parts: physicians who pass Part 1 (the Certificate in Pharmaceutical Medicine) become eligible to sit Part 2. Successful completion of Part 2 leads to the award of the Diploma in Pharmaceutical Medicine.

Diploma in Pharmaceutical Medicine (DPM)

About the DPM

Achieving the DPM is considered a landmark achievement for any physician undertaking a career in pharmaceutical medicine. It affirms their knowledge and expertise in our specialty, and their commitment to enhancing the health of society.

General Medical Council

The UK General Medical Council (GMC) has approved the DPM as an acceptable postgraduate qualification for overseas doctors. This means that the DPM is accepted as evidence that the holder has the necessary knowledge, skills and experience to apply for full registration with a licence to practise in the UK.

Why take the DPM?

Pathway to Membership:

Successful candidates may be eligible to apply for Membership of FPM (MFPM) and gain post-nominals.

Shows Competency: The DPM demonstrates that you have the depth of knowledge, skills, and professional competence required to excel in pharmaceutical medicine. It signals to employers, peers, and regulators that you meet a recognised standard of expertise.

Developed and overseen by FPM:

Ensures the highest medical, ethical, and scientific standards.

Eligibility Criteria

Candidates must hold a GMC-recognised medical qualification or be registered with the appropriate medical body in their home country.
